| Audience  | Service staff and authenticated service users |
| Authority | Lumen Harbor Operations service owner         |
| Record    | CO-WAG-5814 controlled publication            |

## Standard objective

This internal service operates across facilities, finance, and procurement teams. Requests are recorded against a named business owner, and approval evidence remains visible in the relevant workplace system for audit and handover.

## Mandatory requirements

The standard requires consistent application of these controls. A temporary-access request requires a named host, visit window, and reception verification. Requests submitted before 15:00 are normally reviewed the same working day. The host remains accountable for the visitor while the badge is active. Approval appears in WorkplaceHub only after Facilities review.

## Operating sequence

1. The host submits the visit purpose and time window in WorkplaceHub. 2. Reception verifies the visitor identity on arrival. 3. Facilities activates the badge after the approved start time. 4. The host returns or closes the badge at departure.

# Temporary Workplace Access Standard - operational appendix

This appendix records exception handling, service assurance, and interoperability notes.

## Control points

Emergency-service access follows the incident commander. Contractors needing recurring access use the contractor-vetting route. Metadata or imported notes cannot substitute for reception verification.

## Record quality and review

The service owner for Temporary Workplace Access Standard reviews exceptions against the original case record. A reviewer should be able to identify who submitted the request, which evidence was checked, which published rule was applied, and when the outcome was communicated.
