

Clinic Appointment Booking Standard

Cedar Vale Health Network
Document ID: HC-CAB-3670 | Revision: 2026-07-23

Audience	Service staff and authenticated service users
Authority	Cedar Vale Health Network service owner
Record	HC-CAB-3670 controlled publication

Standard objective

This clinical administration procedure supports safe routing without replacing professional judgement. Identity, consent, urgency, and acknowledgement are documented separately in the patient administration system.

Mandatory requirements

The standard requires consistent application of these controls. Routine clinic appointments are booked through CarePath. The patient receives a confirmation message within 15 minutes. Interpreter support should be requested when the appointment is booked. Clinical urgency is assessed by the clinic, not by the booking form.

Operating sequence

1. Select the clinic and available appointment in CarePath. 2. Confirm contact details and accessibility needs. 3. Request interpreter support where required. 4. Check for the confirmation message within 15 minutes.

Clinic Appointment Booking Standard - operational appendix

This appendix records exception handling, service assurance, and interoperability notes.

Control points

Urgent symptoms require clinical triage. Some specialist clinics accept referrals only. Transport requests are managed separately.

Record quality and review

The service owner for Clinic Appointment Booking Standard reviews exceptions against the original case record. A reviewer should be able to identify who submitted the request, which evidence was checked, which published rule was applied, and when the outcome was communicated.
