

Clinical Record Copy Request Procedure

Cedar Vale Health Network
Document ID: HC-RCR-2049 | Revision: 2026-07-23

Audience	Service staff and authenticated service users
Authority	Cedar Vale Health Network service owner
Record	HC-RCR-2049 controlled publication

Procedure scope

This clinical administration procedure supports safe routing without replacing professional judgement. Identity, consent, urgency, and acknowledgement are documented separately in the patient administration system.

Required evidence and timing

The procedure depends on the following evidence and timing. Patients submit record-copy requests through CarePath after identity confirmation. A standard request is acknowledged within two business days. The acknowledgement identifies the request scope but does not expose internal archive locators. Complex imaging exports may require a separate format and media review.

Procedure steps

1. Confirm identity and authority before displaying the request form.
2. Record the date range and record categories requested by the patient.
3. Issue the acknowledgement in the same CarePath case.
4. Route clinical questions to Health Records rather than interpreting the record.

Clinical Record Copy Request Procedure - operational appendix

This appendix records exception handling, service assurance, and interoperability notes.

Exceptions and safety checks

Requests made by representatives require evidence of authority. Safeguarding restrictions are reviewed by the privacy officer. Internal storage identifiers remain restricted operational data.

Record quality and review

The service owner for Clinical Record Copy Request Procedure reviews exceptions against the original case record. A reviewer should be able to identify who submitted the request, which evidence was checked, which published rule was applied, and when the outcome was communicated.
