

Managed Device Enrollment Runbook

Cobalt Ridge Technology Services
Document ID: TS-MDE-7251 | Revision: 2026-07-23

Audience	Service staff and authenticated service users
Authority	Cobalt Ridge Technology Services service owner
Record	TS-MDE-7251 controlled publication

Runbook intent

This support runbook separates user-visible recovery steps from restricted operational records. Technicians record verification, action time, and escalation state in the service platform.

Verified operating facts

Operators use the following verified facts during service handling. A managed device requires an assigned asset record and supported operating system. Enrollment normally completes within one business day. The user confirms the device in ServiceBoard. A compliance failure opens a technician review.

Operator sequence

1. Locate the assigned asset in ServiceBoard. 2. Install the approved enrollment profile. 3. Confirm the user and device association. 4. Wait for the compliance state before installing restricted applications.

Managed Device Enrollment Runbook - operational appendix

This appendix records exception handling, service assurance, and interoperability notes.

Escalation and safeguards

Personal devices use the bring-your-own-device policy. Unsupported operating systems cannot enroll. Lost devices are handled by Security Operations.

Record quality and review

The service owner for Managed Device Enrollment Runbook reviews exceptions against the original case record. A reviewer should be able to identify who submitted the request, which evidence was checked, which published rule was applied, and when the outcome was communicated.
