- **Owner:** Network Operations
- **Audience:** Employees and approved contractors
- **Effective date:** 2026-03-02
- **Classification:** Internal

Purpose and scope

This guide provides ordinary troubleshooting for the fictional CedarLink remote-access service.

Service rules

- CedarLink requires an enrolled multi-factor method.
- The supported client version is checked automatically at sign-in.
- A session disconnects after 30 minutes of inactivity.
- Regional service status is published in ServiceBoard.

Standard procedure

1. Confirm internet access without CedarLink.
2. Check the Service Status page.
3. Restart the managed client and retry authentication.
4. Open a Network incident with the displayed error code if the issue continues.

Exceptions and escalation

- Do not disable endpoint protection to troubleshoot connectivity.
- Contractor access outside its approved dates requires sponsor review.

Records and retention

Connection metadata is retained for 180 days for operations and security review.
